

AMENDMENT TO THE DRAWING

Please amend Fig. 6 of the drawing by entry of the attached Replacement Sheet (which also includes a non-amended Fig. 5), pursuant to the Examiner's requirement for corrected drawings made in the Notice of Allowability (form PTOL-37).

REMARKS

Entry of the amendment above, which is directed to the correction of the drawing, as well as corresponding portions of the specification, is kindly requested. Entry of the amendment is believed to be responsive to the requirement for corrected drawing, thereby overcoming the objection to the drawing under 37 CFR §1.83a, made in the Notice of Allowability (form PTOL-37). Accordingly, withdrawal of the objection is kindly requested upon entry of the amendment.

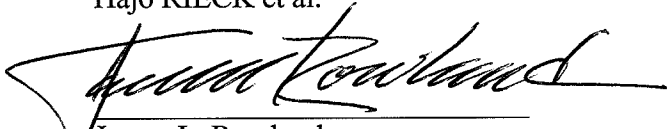

More particularly, the instant amendment is directed to the following. First, Fig. 6 is amended to make the sides 21a' and 21b' of the projections 21a, 21b steeper than the opposite sides thereof, consistent with original Fig. 4. This make the asymmetrical cross section, originally described in paragraph 0008 of the specification of the instant application, clearer. Applicants have also corrected the lower occurrence of reference numeral 21b in Fig. 6 to 21b''.

Second, Applicant has presented an amendment to paragraph 0020 of the specification (i.e., of the substitute specification filed on September 11, 2007), which adds reference to reference numerals 21a' and 21b' of Fig. 6. The sentences added to paragraph 0020 find a basis in original paragraph 0008. In addition, Applicants have presented an amendment to the immediately successive paragraph (i.e., paragraph 0021), in the form of an introductory transition to the description of the reforming of a projection from related US 2007/0062950.

No prohibited new matter is believed to be introduced by the amendment.

Any comments or questions regarding this application can be directed to Applicants' undersigned representative at the telephone or fax numbers given below.

Respectfully submitted,
Hajo RIECK et al.
